

# sprof internal

August 11, 2013

**Encoding** UTF-8

**Type** Package

**Title** Profiling, timing and optimization utilitites

**Version** 0.0-6

**Date** 2013-08-02

**Author** Günther Sawitzki

**Maintainer** Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Description** Support utilities for profiling and dynamic code analysis.

**License** GPL-2 | GPL-3

**Suggests** wordcloud, timeit, RColorBrewer

**URL** <http://sintro.r-forge.r-project.org>

**ByteCompile** FALSE

**KeepSource** TRUE

**BuildVignettes** FALSE

sprof-package	<i>sprof: Analysis of R profiles</i>
---------------	--------------------------------------

---

## Description

Profiling, timing and optimization utilitites

## Details

Package: sprof  
 Type: Package  
 Version: 0.0-6  
 Date: 2013-08-02  
 License: GPL-2 | GPL-3

[readRprof\(\)](#) reads a profile file from [Rprof\(\)](#) or other profilers and returns a composite structure of class sprof. The basic components of sprof are (conceptually) four data frames

info	general information and summaries
nodes	node specific information
stacks	node specific information. Stacks are random snapshots from the program execution, possibly including side in
profiles	collected records of a profile, encoded as references to stacks

To create a profile on the fly, use [sampleRprof](#).

To import profile information written by [Rprof](#) or other profilers, use [readRprof](#).

For sprof, the usual access functions are supported.

## Note

Version 0.0-6 is a clean-up version. Recommendations/requests for the interface definition are requested at this point.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
## Not run:  
data(sprof01lm)  
str(sprof01lm)  
plot(sprof01lm)  
  
## End(Not run)
```

---

adjacency

*sprof to adjacency matrix*

---

**Description**

convert node information from a sprof structure to adjacency matrix.

**Usage**

```
adjacency(sprof, keep.names = TRUE, rmzero=TRUE, no.name="<nn>")
```

**Arguments**

sprof	a sprof structure.
keep.names	boolean. Copy node names as row- and column names.
rmzero	boolean. Remove nodes with no edges.
no.name	If not null: replacement for empty strings as name.

**Value**

a correspondence matrix

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**References**

See the vignette of package sprof.

**Examples**

```
data(sprof01lm)  
adjacency(sprof01lm)
```

barplot\_s

*Sorted Bar Plots***Description**

Creates a sorted bar plot with vertical or horizontal bars.

**Usage**

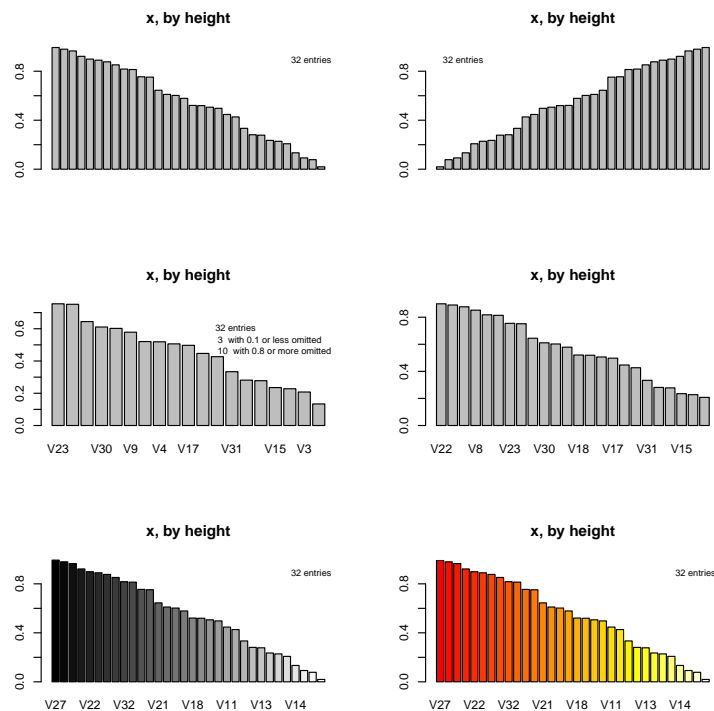

```
barplot_s(height,
sort_by,
decreasing = TRUE,
lowtrim, hightrim, trimlegend = TRUE,
col, coli, colfun,
main, ...)
```

**Arguments**

height	either a vector or matrix of values describing the bars which make up the plot. See <a href="#">barplot</a> .
sort_by	a variable to sort by. Defaults to height.
decreasing	boolean. Sorting direction.
lowtrim	A optional lower trim value. Observations with sort_by values up to lowtrim are discarded.
hightrim	A optional upper trim value. Observations with sort_by values from lowtrim are discarded.
trimlegend	Boolean. Show a legend about trimmed values.
col	a vector of colors for the bars or bar components. By default, grey is used if height is a vector, and a gamma-corrected grey palette if height is a matrix.
coli	An index into the col table, based on original sorting.
colfun	A function to generate a col palette. grey is rescaled to 1..n.
main	overall title for the plot
...	Passed to barplot

**Details**

To come. Plots are from this collection:

## Value

Invisible: A data frame with components

x	height
perm	the permutation applied
coli	the colour index applied
col	optional: the colours selected

## Note

Part of this could go to the R base function [barplot](#).

## Author(s)

Günther Sawitzki <[gsawitzki@users.r-forge.r-project.org](mailto:gsawitzki@users.r-forge.r-project.org)>

## See Also

[barplot](#)

## Examples

```
x <- runif(100)

barplot_s(x)

x <- rnorm(100)
```

```
barplot__s(x, colfun=heat.colors, lowtrim=-1)

rm(x)
```

---

edgematrix	<i>Expand adjacency information to an edge table</i>
------------	--

---

### Description

Expand adjacency information from an adjacency matrix or a sprof data structure to an edge table

### Usage

```
edgematrix(data, counts = TRUE, na.rm = TRUE, no.name="<nn>")
```

### Arguments

data	an adjacency matrix or a sprof data structure.
counts	include a column of counts
na.rm	remove lines with a count NA.
no.name	If not null: replacement for empty strings as name.

### Details

The adjacency matrix is flattened. Lines with a count zero are eliminated.

### Value

A data frame.

from	Name of from node.
to	Name of to node.
count	optional. Frequencies of edges.

### Author(s)

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

---

list.as.matrix	<i>Convert list to matrix</i>
----------------	-------------------------------

---

**Description**

Convert list to matrix. List entries go to matrix columns, filled for equal length.

**Usage**

```
list.as.matrix(x, filler = NA)
```

**Arguments**

x	a list of numeric vectors.
filler	a value to be used as a filler

**Value**

A matrix with the values from x, filled to matrix shape.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
x <- list(x1=c(1,2,3),x2=3, x3=4:8)
list.as.matrix(x)
list.as.matrix(x,filler=0)
```

---

nodepackage	<i>Find a package that may contain a node</i>
-------------	---

---

**Description**

[getAnywhere\(\)](#) is used to look up x, and the package or namespace information is used to give a source package.

**Usage**

```
nodepackage(x)
```

**Arguments**

x	a character string or name, or a vector.
---	--

**Details**

There is no indication whether the information is from a namespace or from a package information.

No indication is given if multiple hits are encountered.

The information is based on the run time environment of this function. This may be different from the environment the object is taken from.

See the help information for [getAnywhere\(\)](#) for more warnings.

**Value**

a character string or a vector of strings with the package names.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**See Also**

[getAnywhere\(\)](#)

**Examples**

```
nodepackage("getAnywhere")
```

---

nodescloud	<i>Nodescloud of nodes from profile data</i>
------------	--

---

**Description**

Show the nodes from a profile, with class encoded as colour and frequency encoded as size.

**Usage**

```
nodescloud(sprof, min.freq = 3, icol, col)
```

**Arguments**

sprof	A data structure as returned by <a href="#">readRprof</a> .
min.freq	Minimum frequency to be included.
icol	An index vector to colour palette. Defaults to <code>sprof\$nodes\$icol</code> .
col	A colour palette.

---

nodesprofile

*Run length matrix*

---

**Description**

Extracts run length information from a sprof data structure with profiling information.

**Usage**

```
nodesprofile(sprof)
```

**Arguments**

sprof                      a sprof data structure with profiling information.

**Details**

Run lenght counts by node, level and run length.

**Value**

counts[ node, level, run length] .

**Note**

This expands a sparse matrix to full. Avoid to use it.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
data(sprof01lm)
str(nodesprofile(sprof01lm) )
```

---

nodesrunlength

*Marginal information for run length from profile*

---

**Description**

Run length count, by node and run lenght, from profile.

**Usage**

```
nodesrunlength(sprof, clean=TRUE)
```

**Arguments**

sprof	a sprof data structure with profiling information.
clean	boolean.

**Details**

If clean=TRUE, zero results are removed and the nodes are sorted by average time.

If clean=TRUE, zero results and sorting are preserved. Trailing zero count nodes may have been lost in the process, and are added.

**Value**

A matrix count[node, run length] with additional columns

nr_runs	sum of counts over all run lengths.
total_time	sum of count*run length
avg_time	total_time / count

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
data(sprof01lm)
nodesrunlength(sprof01lm)
```

---

plot.sprof	<i>plot for profiles</i>
------------	--------------------------

---

**Description**

plot a plot for the output of class scode.

**Usage**

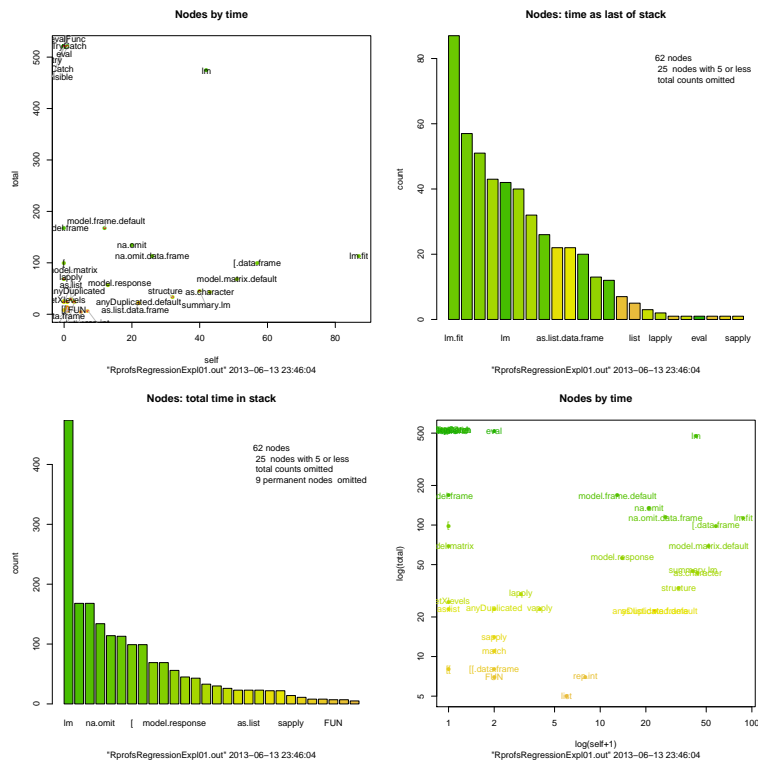

```
## S3 method for class 'sprof'
plot(x, ...)
```

**Arguments**

x	A data structure as returned by <a href="#">readRprof</a> .
...	further arguments passed to or from other methods.

## Details

These displays may be outdated. Please run the examples. Plots are from this collection:

## Value

subject to change

### Note

See the vignette for in-context explanations.

Displays of the graph structure are given in the vignette.

plot.sprof(sprof01lm)
par(oldpar)
```

---

plot_nodes	<i>Plot profiling information on node level.</i>
------------	--

---

**Description**

Various plots of a profile.

**Usage**

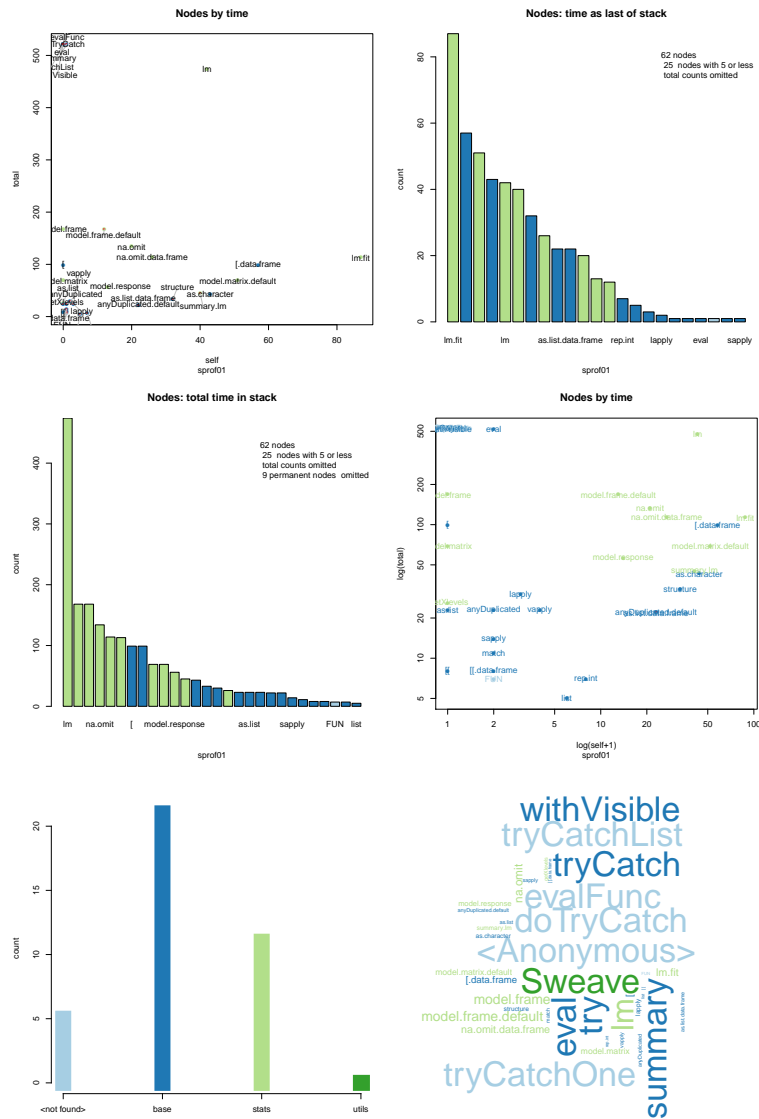

```
plot_nodes(x, which = c(1L, 2L, 3L, 4L), col = NULL,
ask = prod(par("mfcol")) < length(which) && dev.interactive(),
src = NULL, mincount = 5, horiz=FALSE, ...)
```

**Arguments**

x	preferably a sprof object. Other data structures may be extended
which	Selector of plots to show.
col	Colour table
ask	boolean. Ask for a new page?
src	String to be used as source identifier.
mincount	minimum total frequency count for node to be shown in barcharts.
horiz	draw horizontal bar plots.
...	passed.

**Details**

These displays may be outdated. Please run the examples. Plots are from this collection:

**Value**

To come.

profiles_matrix	<i>Extract a node incidence matrix from profile information.</i>
-----------------	--

---

**Description**

Extract a node incidence matrix from profile information.

**Usage**

```
profiles_matrix(x)
```

**Arguments**

x                      an sprof data structure.

**Value**

an incidence matrix, NA filled.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
data(sprof01lm)
smat <- profiles_matrix(sprof01lm)
image(smat)
```

---

readRprof

Read [Rprof](#) Output files and Stack Logs

---

**Description**

Read a log of stack entries, such as the output of the [Rprof](#) function, and generate a more accessible representation.

**Usage**

```
readRprof(filename = "Rprof.out", chunksize = 5000,
interval = 0.02,
head = c("auto", "none", "Rprofmem"),
id = NULL)
```

**Arguments**

filename	Name of a file produced by <code>Rprof()</code> .
chunksize	Number of lines to read at a time.
interval	Real: time interval between samples, in s.
head	<code>c("auto", "none", "Rprofmem")</code> to interpret control information as provided by <code>Rprof</code> or <code>Rprofmem</code> . See details.
id	An optional identification string. Defaults to filename and date.

**Details**

This function reads a log file of stacks, one stack snapshot per line, stack entries separated by space.

As profiling output file could be very large, it is read in blocks of `chunksize` lines. Increasing `chunksize` will make the function run faster if sufficient memory is available.

The input format is controlled by the `head` argument. Format "auto" tries to detect control lines as interspersed by `Rprof`. These lines are not included in the output.

"none" ignores all control information and includes these lines as strange stacks.

"Rprofmem" isolates headers as provided by `Rprofmem`. new page entries are encoded as malloc requests with length 0.

**Value**

This data structure is subject to change.

Temporarily: A list with components

firstline	A verbatim copy of the first line of the input file. Typically this contains timing or formatting information.
nodes	A vector of node names. This may include stray entries from interspersed lines.
stacks	A vector of unique stacks found in input, stored as verbatim copies.
stacksrenc	A list of unique stacks in top down order (top first), encoded as vectors or references to stacks.
data	A vector encoding the data file as references to stacks.
timesRLE	Vector of sampling intervals, in milliseconds. Run-length encoded.
freq	A frequency table summarizing data.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-project.org>, based on the code of [summaryRprof](#)

**References**

<http://sintro.r-forge.r-project.org/>

**See Also**

[summaryRprof](#)

[summaryRprof](#)

[flatProfile](#) in library(proftools).

{parse\_rprof} in library(profr).

The chapter on “Tidying and profiling R code” in “Writing R Extensions” (see the ‘doc/manual’ subdirectory of the R source tree).

[Rprof](#) is a sampling profiler.

[tracemem](#) traces copying of an object via the C function duplicate.

[Rprofmem](#) is a non-sampling memory-use profiler.

<http://developer.r-project.org/memory-profiling.html>

**Examples**

```
## Not run:
## Rprof() is not available on all platforms
profininterval <- 0.001
simruns <- 100

n <- 10000
x <- runif(n)
y0 <- 2 + 3 * x

sinknull <- textConnection(NULL, "w"); sink(sinknull)
Rprof(tmp <- tempfile(), interval = profinterval)
```

```

for (i in 1:simruns) {y <- y0 + rnorm(n); xxx<- summary(lm(y~x))}
Rprof()

Rprof_out <- readRprof(tmp)

unlink(tmp)
sink(); close(sinknull)

str(Rprof_out)

### End(Not run)

```

---

rkindex	<i>Index, based on rank.</i>
---------	------------------------------

---

## Description

Convert x to an index in  $1 \dots \text{maxindex}$

## Usage

```
rkindex(x, maxindex = length(x), pwr = 1, ties.method = "random")
```

## Arguments

x	A vector of data to covert.
maxindex	Maximum for result
pwr	See details.
ties.method	passed to rank.

## Details

x is transformed to a rank scale, using ties.method. It is then rescaled to  $[0,1]$ , and (optionally) a power transformation is applied. In visualisation terms, this is a gamma correction. The result is rescaled to  $1 \dots \text{maxindex}$ .

## Value

A vector of rescaled values.

## Author(s)

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

---

rrle	<i>Recursive run length encoding.</i>
------	---------------------------------------

---

### Description

Encode a matrix as run-length, top down. Encoding respects previous runs, e.g line 2 encodes runs in each run of line 1.

### Usage

```
rrle(x, collapseNA =FALSE)
```

### Arguments

x	a matrix.
collapseNA	boolean. Collapse runs of NA.

### Details

By default, different NA data are not considered equal. collapseNA collapses runs of NA in the result. For recursion however they are treated as singular data, not as runs. This may need discussion.

### Value

list of run length encoded lines

### Note

This could go to rle in package base.

The date structure used for rle would be better represented as a data.frame.

Run length and other compressions might be implemented in data.frames by default.

### Author(s)

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

### See Also

[rrleb](#), [~~~](#)

### Examples

```
x <- matrix(c(
  1,1,1,2,2,
  3,3,4,4,4,
  5,5,6,6,7,
  8,9,9,0,0
),nrow=4, ncol =5, byrow=TRUE)
xrrle <- rrle(x)
xrrle

t(sapply(xrrle, inverse.rle))
```

---

`rrleb`*Recursive run length encoding bottom up.*

---

### Description

Encode a matrix as run-length, bottom up. Encoding respects previous runs, e.g line n-1 encodes runs in each run of line n.

May be removed.

### Usage

```
rrleb(x)
```

### Arguments

`x`                      a matrix.

### Value

list of run length encoded lines

### Author(s)

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

### See Also

[rle](#),

### Examples

```
x <- matrix(c(
  3,3,4,4,4,
  5,5,6,6,7,
  8,9,9,0,0,
  1,1,1,2,2
),nrow=4, ncol =5, byrow=TRUE)
xrrleb <- rrleb(x)
xrrleb

t(sapply(xrrleb, inverse.rle))
```

---

sampleRprof	<i>Get a sample profile</i>
-------------	-----------------------------

---

**Description**

Get a sample profile and return it as a sprof data structure.

**Usage**

```
sampleRprof(expr, runs = NULL, gcFirst = TRUE, interval = 0.001, ...)
```

**Arguments**

expr	an expression to be profiled.
runs	nr of runs to profile.
gcFirst	boolean. Profile GC.
interval	Real: time interval between samples, in s.
...	additional parameters, passed to Rprof

**Value**

A list of type sprof

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**References**

<http://sintro.r-forge.r-project.org/>

**Examples**

```
res_lm <- sampleRprof(for (i in 1:1000) yy<- lm(runif(1000)~rnorm(1000)), runs=100)
```

---

shownodes	<i>Show node information from a profile</i>
-----------	---

---

**Description**

Plot node information from a profile in various plots.

**Usage**

```
shownodes(sprof, col)
```

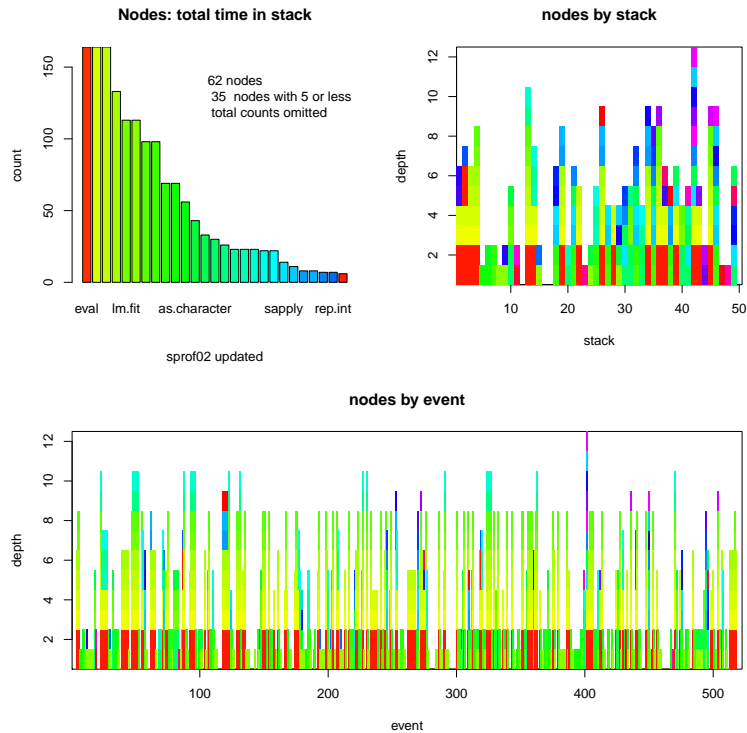

**Arguments**

sprof	A data structure as returned by <a href="#">readRprof</a> .
col	A colour palette for the plots.

## Details

Note: these figures may be outdated. Please run the examples.

Plots are from this collection:

## Value

Used for the side effect of showing the plots.

## Author(s)

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

```
## Not run:
data(sprof01lm)
shownodes(sprof01lm)

## End(Not run)
```

---

sprof01lm

*sprof sample data*

---

## Description

An example data set for the functions in package sprof.

**Usage**

```
data(sprof01lm)
```

**Format**

The format is: A List of 4 \$ info : 'data.frame': 1 obs. of 8 variables: \$ nodes : 'data.frame': 62 obs. of 5 variables: \$ stacks : 'data.frame': 50 obs. of 7 variables: \$ profiles: List of 4

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**References**

See the vignette of package sprof.

**Examples**

```
data(sprof01lm)
str(sprof01lm)
plot(sprof01lm)
```

---

stackstoadj

*Stacks to adjacency matrix*

---

**Description**

convert stack information to adjacency matrix

**Usage**

```
stackstoadj(xstacks, xfreq, maxnode)
```

**Arguments**

xstacks	list of stack ids
xfreq	vector of frequencies or weights
maxnode	maximum of nodes (maybe higher then in stacks)

**Value**

the adjacency matrix

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
#
```

---

str_prof	<i>str for sprof objects</i>
----------	------------------------------

---

**Description**

str for sprof objects

**Usage**

```
str_prof(x)
```

**Arguments**

x                      an sprof object

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
data(sprof01lm)
str_prof(sprof01lm)
```

---

summary.sprof	<i>Summary for profiles</i>
---------------	-----------------------------

---

**Description**

Print a summary for the output of class scode.

**Usage**

```
## S3 method for class 'sprof'
summary(object, ...)
```

**Arguments**

object                  A data structure as returned by [readRprof](#).  
 ...                    further arguments passed to or from other methods.

**Value**

None.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**References**

<http://sintro.r-forge.r-project.org/>

**See Also**

## End(Not run)
```

---

summary_terminals	<i>Tabulate leaf nodes</i>
-------------------	----------------------------

---

**Description**

Tabulate leaf nodes

**Usage**

```
summary_terminals(x)
```

**Arguments**

x                      an sprof data structure.

**Value**

A table of frequencies, bystack.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**Examples**

```
data(sprof01lm)
summary_terminals(sprof01lm)
```

---

updateRprof

*Update statistics and tables in a sprof object*

---

**Description**

Synchronize information from profiles and stack tables, and update statistics.

**Usage**

```
updateRprof(sprof, id)
```

**Arguments**

sprof	A data structure as returned by <a href="#">readRprof</a> .
id	optional. A replacement for the info\$id string .

**Value**

An updated sprof data structure.

**Note**

See the vignette of package sprof.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

---

writeRprof

*Write profile data*

---

**Description**

Write a profile data file from a sprof data structure.

**Usage**

```
writeRprof(sprof, filename = "Rprof.Out")
```

**Arguments**

sprof	a data structure from package sprof
filename	The file to be used for exporting the profiling results.

**Details**

writeRprof only writes the stack entries for the profile.

This can be used to export information after preprocessing with sprof to some package designed for Rprof output.

**Value**

An invisible list with the profile entries, headers removed.

**Note**

See the vignette for in-context explanations.

Displays of the graph structure are given in the vignette.

**Author(s)**

Günther Sawitzki <gsawitzki@users.r-forge.r-project.org>

**References**

<http://sintro.r-forge.r-project.org/>

**Examples**

```
## Not run:  
data(sprof01lm)  
writeRprof(sprof01lm)
```

```
## End(Not run)
```
